

Great American Lines, Inc.

Quality & Environmental Policy

Our shipping operations are conducted to respect and minimize impact on the environment as guided by maritime regulations and other requirements while providing a customer focused marine transportation service. We are especially committed to the protection of the marine environment and we shall strive to eliminate waste while reducing consumption of materials and emission of pollutants to air and water.

We shall take steps to identify opportunities to continually improve both our quality and environmental performance as guided by our Quality and Environmental Management System (QEMS). Our QEMS shall remain applicable to the technical management aspects of our shipping operations and incorporate established safety management system procedures and requirements as the basis for controlling our compliance with international, port state and flag state regulations and all other requirements.

We strive to meet our customer's expectations by thoroughly reviewing each customer's service requirements prior to embarking any cargo for shipment.

We shall review aspects of our activities that impact the environment on a regular basis and establish objectives and targets for implementing appropriate improvements.

Our shipping operations will benefit from our commitment to provide the level of service that our customers expect while protecting the marine environment.
